# 01 BABY FENRIR INTRODUCTION

Baby Fenrir a mythological meme token designed to give back to the community.

## Background

The whole project started with the idea of rewarding the investors and bring a self-sufficient/sustainable system, there comes the idea to develop a reward token with transfers-on-fees that allows every single holder to choose their own preferred reward token.

The fees on swaps and transfers generate wealth for marketing, management of the project, development and the most important one: wealth for hodlers!

The contract distributes automatically the accrued fees to the holders on their wallets for the token chosen in the reward dapp at [app.baby-fenrir.com](https://app.baby-fenrir.com)

Baby Fenrir (BFR) was made to become more than just a meme token. BFR took the step away from your typical dog and cat tokens to give the world a mythological token that will be built off of the community's influences to make a unique meme token on the market. BFR will continuously progress with the endgame in sight.

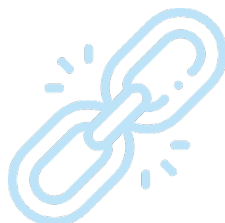

## 02 DUAL CHAIN TOKEN

Baby Fenrir is a dual chain token , it's both on Binance Smart Chain and Ethereum Chain with the same characteristics to empower both communities in just one project.

Binance Smart Chain (BSC) and Ethereum chain look very similar. DApps and tokens built on BSC are compatible with the Ethereum Virtual Machine (EVM).

Public wallet addresses are the same on both blockchains, Baby Fenrir token is purchasable on both uniswap (ETH) and pancakeswap (BSC), allowing a greater and diversified investors' engagement.

## 03 SMART CONTRACT FEES

**BABY FENRIR** offers a **Buy-Back** and burn mechanism. A fee of 1% is the charge for each transaction that takes place on the network. The contract owner can activate or disable the automatic buyback and burn, if activated, it will automatically buy back BFR tokens on the open market and remove that number of tokens from total and circulating supply. This can be considered as a defrost mechanism that affects the token's price in the longer run. This mechanism will also help to stabilize BFR token because it creates positive impacts on the price of the token and removes the negative impact created by whales.

In addition BFR has a % of automatic burn for every transaction based on the triggered action (transfer, buy or sell)

FEES	TRANSFERS	BUY	SELL
% tax-fee for dividends	2	2	6
%tax for burn	2	1	2
%tax for marketing	1	1	1
%tax for treasury/development	1	1	1
%tax for buyback/development	1	1	1
